Title: LLMOps Document Comparison Experiment

This document serves as **version B** for the LLMOps experiment on Retrieval-Augmented Generation (RAG).
The objective is to evaluate how RAG systems perceive and compare related document pairs.

The content in this version emphasizes the **accuracy** of RAG models optimized using **LoRA techniques**.
Performance indicators such as **CIDEr** and **BLEU** illustrate noticeable enhancements in content relevance.

Additionally, this document contains a distinct note on the impact of **semantic retrievers** in hybrid retrieval setups.
